## Progressive Retinal Atrophy, prcd

(PRCD Exon 1)

This eye condition causes gradual degeneration of the retina. Affected dogs typically lose night vision first, followed by progressive vision loss over time.

[Your dog's risk](#)[About the condition](#)

 CLEAR

**The Pied Piper of JPL is not at risk for Progressive Retinal Atrophy, prcd**

**What does this mean for her?**

**The Pied Piper of JPL doesn't have the variant we tested.**

## **What can you do?**

If your dog is affected, we recommend the following actions:

- 1** Talk to your vet about your dog's PRA result so you can work together to plan their ongoing care and monitoring.
- 2** Schedule regular eye exams with your vet or a veterinary ophthalmologist to monitor for changes or complications such as cataracts.
- 3** If your dog's vision changes, help them adjust by keeping furniture and routines consistent, using verbal cues, and keeping them on a leash in unfamiliar areas.
- 4** Products such as protective halos can also help dogs navigate safely if their vision declines.

### **A genetic test is not a diagnosis for disease**

Please talk to your vet about The Pied Piper of JPL's genetic results, or if you think that she may have a health condition or disease.
